

# FOSTAC MAXIMUS<sup>®</sup>

Maximizing natural energy – the intelligent  
solution for mankind and the environment

# FOSTAC MAXIMUS® - the intelligent solution for mankind and the environment

# Solution

With ever-increasing usage of electrical power, and capacity bottlenecks in many of the world's countries, mankind is facing a crucial challenge – and the challenge is all the greater, because conventional generation of electrical power in coal, gas and nuclear power stations leads to increasingly dangerous environmental hazards. There is an urgent need to develop new solutions that are environmentally friendly yet still economically viable.

Type M100W

The FOSTAC MAXIMUS® is a revolutionary new product from the house of FOSTAC that meets these requirements in an outstanding manner. It offers an intelligent solution to deal with the constant increase in demand for electrical power in an economical and environmentally neutral way. Its technology is based on the latest discoveries in quantum physics, and is an example of the consistent application of the laws of electro-magnetism.

## What FOSTAC MAXIMUS® can do for you

The FOSTAC MAXIMUS® offers you an innovative and environmentally friendly technology which produces high quality alternative energy.

The FOSTAC MAXIMUS®

- maximizes the efficiency of electricity
- reduces power consumption
- increases the feed-in power of solar power equipment etc.
- harmonizes electro-smog
- optimizes natural energy in buildings and perceptibly increases the quality of life

The FOSTAC MAXIMUS® can be used in the home or in any commercial building. Small and medium enterprises profit in just the same way as industrial companies and large corporations.

## Maximizes the efficiency of electricity

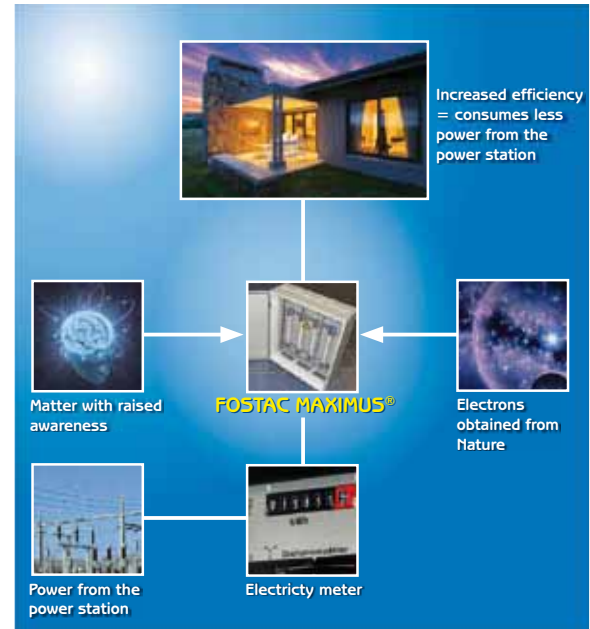

- reduces power consumption → lowers costs
- optimizes power generation → increases power input

The FOSTAC MAXIMUS® draws its energy from the permanent flow of electrons in nature, which results from the potential difference between the Earth and the ionosphere. Thus the unit generates power from an alternative source, according to the composition of the power demand, e.g. lighting, domestic appliances, cooling units, heat pumps etc.

The strong tachyonic field in the accumulators of the FOSTAC MAXIMUS® acts as a kind of antenna, attracting electrons from the natural environmental energy field and channeling them directly into the electric circuit. This results in greater energy efficiency and a higher efficiency factor, which reduces the power drawn from the generating plant. In this way you can optimize your power consumption and reduce your electricity bills. Moreover, the effect of the increase in energy efficiency is also a great advantage with solar power equipment etc., where power generation is optimized and the feed-in power is increased.

On average, users of the FOSTAC MAXIMUS® reduce their power consumption by 15 % to 25 % and feed-in power is increased by 10% to 20%, though actual figures may vary both above and below those quoted.

## Operating principle

## Harmonization of electro-smog – optimizes the natural energy in a building

The FOSTAC MAXIMUS® harmonizes the electromagnetic interference fields created by alternating current – the initial negative effect of electro-smog on living tissue is repolarized and totally neutralized. The result is a perceptible increase in the natural life energy in the building, and the room or working environment is improved. Vitality is reinvigorated and the immune system is strengthened. People who are full of energy and feel good are healthier, more relaxed, more creative, and can withstand far more stress. Without being consciously aware of it, they are more committed to their work or their company, and they are more productive.

Whether you use the FOSTAC MAXIMUS® at home or at work – it harmonizes the electro-smog appreciably in any building and thus provides you with a better quality of life. Treat yourself to a pleasant surprise and enjoy a totally new feeling of well being, free from the adverse effects of negative electro-magnetic interference fields.

Note: For electro-smog in the high-frequency range (due to mobile phones, wireless networks, cordless telephones, etc.) further measures may be required – and we would be pleased to help you with this as well.

# Principles

## How the FOSTAC MAXIMUS<sup>®</sup> works - the scientific principles

The FOSTAC MAXIMUS<sup>®</sup> makes use of the latest discoveries in quantum physics. In connection with research on new electronic and medical systems that were tested as part of the Russian space program, Russian and Ukrainian scientists have been able to demonstrate that the total information of all matter is stored in the electrons of the atoms.

It follows that the electrons are the active components of every atom, and the nucleus is the reactive part. If the information in the electrons is changed, it causes a corresponding change in the whole atom.

The scientific research also showed that the electron develops a spin (rotation) on its own axis, either clockwise or anti-clockwise according to the type of its information. With sophisticated electronics and mathematical calculations it is now possible to measure and calculate the direction and speed of this spin at any given moment, as well as the emitted wavelengths.

Electrons normally contain a mixture of biologically negative information, which results in a clockwise spin, and biologically positive information, which results in an anti-clockwise spin.

Type M800

The electrons that flow in electrical circuits also obey the same laws of nature. However, these electrons contain an excess of negative information, which results in the electrons rotating in the clockwise sense, and this has a very negative influence on living tissue. Living systems in nature, such as people, animals and plants, react to this with varying degrees of sensitivity – many people feel tired and drained, for example. The phenomenon is referred to as electro-smog.

A further discovery is that the speed of the electron's spin has no fixed value. According to Professor Andropov of the Academy of Sciences in Moscow, the spin speed of the electron can be increased up to 32 times the speed of light, the actual speed being dependent on the information that is imprinted on it.

Where there is a mixture of negative and positive information, the electron spins more slowly – negative and positive, with their opposing energy charges, partially cancel each other out. Thus, the clearer the information, the faster the electron will rotate, and the more powerful its spin will be.

It is precisely these properties of the electron that are put to use in the FOSTAC MAXIMUS®. All the negative information is 'erased' by a high frequency transmission process, and the electrons are programmed with positive information to give them a well-defined charge and accelerate them to maximum spin in the anti-clockwise direction – to which living tissue reacts very positively. The electro-smog is dissipated, producing a detectable and tangible healthy effect.

Another effect of accelerating the spin of the electrons in the electrical circuit is a significant increase in power efficiency. Without affecting either voltage or current, each electron delivers more power – which means that a smaller electron flow is required in order to produce the same power. Therefore less power is drawn from the generating station for the same amount of work – the meters run slower and the electricity bill is lower. The technology of the FOSTAC MAXIMUS® transforms a normal-strength electron, as it were, into a «Superhero».

The technology used here will become more and more prevalent as time goes by, because it is based on the latest scientific research and is an example of the consistent application of the natural laws of electromagnetism. The FOSTAC MAXIMUS® produces natural energy of the highest quality.

# Studies

## How the FOSTAC MAXIMUS® affects its surroundings

Our years of practical experience are confirmed by many scientific studies – electro-smog drains energy from the environment.

Most apartments, family homes, offices, commercial and industrial premises are burdened with negative electromagnetic interference fields. People, animals and plants in such an environment are drained of energy all the time, burdened as they are by electro-smog; and the greater the burden of electro-smog, the more exhausted they feel.

In many buildings the natural energy field has fallen as low as 15 to 45% of the normal level, with dramatic consequences: human health is compromised, vitality decreases, the immune system is weakened, and efficiency falls. There are also psychological effects, such as discontent or depression, poor and disturbed sleep, and even increasing symptoms of illness such as constant headaches, high blood pressure or heart arrhythmia.

In companies, these catastrophic energy conditions create such effects as discontent among the staff, rapid exhaustion, lower creativity and reduced motivation, and noticeably higher absenteeism due to illness. Employees often lose their concentration, errors mount up, and productivity leaves much to be desired – and of course, the company's performance figures reflect this poor situation.

## The FOSTAC MAXIMUS® maximizes natural energy

# Evidence

Following installation of the FOSTAC MAXIMUS®, electro-smog will be totally dissipated. Through the process of repolarization and altering the transmitted information, all negative electromagnetic interference fields are neutralized (except for microwave radiation). As a result, the positive energy fields can rearrange themselves and natural energy reserves are replenished.

This may take a while, depending on the previous burden level of interference and pollution. However, once the natural energy reserves are replenished, there is an enormous effect on the efficiency of the electricity. Moreover, this positive rearrangement has many other effects on the environment. For instance, many users report an increased feeling of well-being, with greater vitality and «joie de vivre». Headaches, disturbed sleep and many other bodily symptoms all vanish, and the quality of life is tangibly increased.

We have received the following feedback from companies: improved working environment; new motivation among the staff; more harmonious working relationships; increased concentration at work; reduced absenteeism due to sickness; increased sales with higher rates or improved yields; reduced electricity consumption; etc.

To sum up: it is very important to take the energy balance in the building seriously, because energy is the prime mover and the driving force of all life.

Whether you use the FOSTAC MAXIMUS® at home or at work, it maximizes natural energy in many ways – which makes it an intelligent solution for mankind and the environment.

## Technical data

# Types

Products for domestic use	Size of energy field	Products for commercial and industrial use	Size of energy field
P40 (up to 40 A)	approx. 35 m	M100W (up to 100 A)	approx. 45 m
M100W (up to 100 A)	approx. 45 m	M200W (up to 200 A)	approx. 75 m
		M200 (up to 200 A)	approx. 75 m
		M250W (up to 250 A)	approx. 84 m
		M250 (up to 250 A)	approx. 84 m
		M400W (up to 400 A)	approx. 127 m
		M400 (up to 400 A)	approx. 127 m
		M403 (up to 400 A)	approx. 127 m
		M503 (up to 500 A)	approx. 150 m
		M800 (up to 800 A)	approx. 240 m
		M1000 (up to 1,000 A)	approx. 300 m
		M1250 (up to 1,250 A)	approx. 400 m

A range of units is available for various power ratings, and they can also be used in combination to meet any power requirement, so that any power rating and any size of building can be covered. We will be happy to provide a quotation to suit your specific requirements.

## Installation

Installation of the FOSTAC MAXIMUS® must always be carried out by a qualified electrical contractor. The FOSTAC MAXIMUS® is connected between the meter and the distribution panel of the building.

## Planning and ordering

For each order, the first step is to complete a checklist, which we will be happy to send you on request. To determine the correct equipment type, we need precise details such as the number of meters, the load rating of the main circuit breaker, details on the size of the building, and so on. Please do not hesitate to call us for a consultation with no obligation.

## Quality from the house of FOSTAC

*Quality*

The FOSTAC MAXIMUS® is a quality Swiss product from the house of FOSTAC, manufactured in Jonschwil, Switzerland, in accordance with SEV regulations (Swiss Association for Electrical, Energy and Information technology). The equipment is tested and certified by Electrosuisse and complies with all requirements of the EU conformity declaration for installation in more than 100 countries worldwide.

## Warranty

FOSTAC International GmbH provides a two year warranty against any manufacturing or material defects resulting in malfunction under normal conditions of use.

Over and above this, FOSTAC International GmbH allows you to return the product after two years. If you are in any way dissatisfied, the equipment may be returned after two years and the full purchase price will be refunded; the costs of installation and de-installation will be borne by the customer. This right of return expires after a period of two years and three months.

For further information regarding warranty, please refer to our General Conditions of Contract available on our website at [www.fostac-international.com](http://www.fostac-international.com).
